

Lesson Assignment 1.1

The button in which you press be able to safely walk across the road:

Primary goal:

Get to the other side of the road safely

Secondary goals:

Understand *when* I'm supposed to walk across?

On this design, it looks like there are three/four different places you can press, possibly resulting in different outcomes.

I might wonder if I'm supposed to press the picture of the man, or the the circle thing is the right thing to press; I might even think that the light at the bottom is the actual button. After all, the light protruding out, as opposed to the other symbols.

In reality, it doesn't matter which symbol you press, you get the same outcome any way.

Would it might be easier to understand if there was only one symbol? And what if the light at the bottom was not protruding? Under is a quick sketch I did, with a single, slightly bigger symbol, and light sources both at the top and bottom
